

Assignment: MongoDB Async Module & Badge Completion

Overview

You will complete two MongoDB University modules asynchronously and submit proof of completion of both badges via GitHub.

Deliverable: New GitHub repository: [mongodb_badge_basics](#)

Due: Tuesday, November 11, 2025 – 11:59 PM ET

Learning Objectives

By completing this assignment, you will be able to:

1. Describe MongoDB as a document database and where it fits in modern application architectures.
 2. Compare relational (SQL) and document (NoSQL) data models at a high level.
 3. Recognize when a document model may be more appropriate than a traditional relational schema.
 4. Connect MongoDB concepts to healthcare-relevant data scenarios.
-

Required Modules

Create or sign in to a free MongoDB account using your **personal email** or **GitHub** at:

- <https://learn.mongodb.com>

Then complete **both** of the following courses:

1. **MongoDB Overview** (Approx. 60 minutes)
<https://learn.mongodb.com/courses/mongodb-overview>
2. **Relational to Document Model** (Approx. 75 minutes)
<https://learn.mongodb.com/courses/relational-to-document-model>

You must complete each course and earn the associated **badge**.

Instructions

1. Sign In / Register

- Go to <https://learn.mongodb.com>.
- Sign in with your **personal email** or **GitHub** account.
- Confirm you can access your profile and track course progress.

2. Complete the Two Courses

- Complete **MongoDB Overview**.
- Complete **Relational to Document Model**.
- Ensure each course shows as **completed** and that a **badge** is issued in your MongoDB Learning profile.

3. Export / Capture Your Badges

- Navigate to your **Profile / Achievements** section in MongoDB University.
- For each badge:
 - Take a **screenshot** showing:
 - Your **name**
 - The **course title**
 - The **badge** or completion status
 - Or copy the **shareable badge URL**, if available.

4. GitHub Submission Requirements ([mongodb_badge_basics](#))

1. Create a new public GitHub repository named: [mongodb_badge_basics](#).
2. In this repository:
 - Add a [README.md](#) file.
 - Upload your badge screenshots (e.g., in an [images/](#) folder) **or** include working badge URLs.
 - In [README.md](#), include:
 - Embedded images and/or links to both badges.
 - A short written response (**max 4–6 sentences total**) addressing:
 1. One or two key differences that stood out to you between relational databases (e.g., MySQL) and non-relational/document databases (e.g., MongoDB).
 2. One **healthcare-specific** scenario where using a non-SQL database like MongoDB would be appropriate, and why.
3. Submit the **GitHub repository URL** in the course LMS for grading.

Grading

This is a **completion-based** assignment.

To receive full credit, you must:

- Complete both MongoDB courses and obtain both badges.
- Provide a valid GitHub repo link to [mongodb_badge_basics](#).
- Ensure:
 - Both badges are clearly visible (image or URL).
 - The reflection questions are answered within 4–6 sentences total.

Late or incomplete submissions may receive reduced or no credit.
